

xifei wu

Frontend Developer

BORN: Oct.9th, 1986
 NATIVE PLACE: Liaocheng, Shandong
 GRADUATE: Shandong University
 MAJOR FIELD: Computer Software and Theory
 DEGREE: Master
 TELEPHONE: 15712872803
 EMAIL: sduwxf@qq.com
 URL OF THIS RESUME: <http://xifeiwu.github.io/>

OBJECTIVE

My profession is software development on the period of both undergraduate and graduate. I take part in 'Electronic Design Contest for College Students' and win 'provincial second prize' in sophomore year, and work on embedded system for several months. My postgraduate major is graphic process, and I know GPU computing very well.

I have worked four years, three years for ISCAS and one year for Acadine Technologies. I worked on many platforms in ISCAS according to project needs, including Linux distribution, android, android watch, nwjs, meego, and focus on developing calendar app for H5OS when I was in Acadine. I used to work on customizing Linux distribution, writing deb package, hybrid app developing on android platform, app development using nodejs or nwjs, developing H5 app on the platform of Firefox OS. More info will be shown in the following.

EDUCATION

Sep 2005 - Jul 2009

College of Computer Science, Yantan University

Bachelor of Computer Science and Technology

- take part in 'Electronic Design Contest for College Students' and win 'provincial second prize'.
- My Thesis is 'The embedded FAT file system for NAND Flash'.

Sep 2009 - Jul 2012

College of Computer Science, Shandong University

Master of Computer Software and Theory

- take part in 'Accelerated Computing Competition in Chinese Universities', and the parallel program gets six times more speed on the platform of AMD HD5850
- My thesis is 'A GPU Accelerated Algorithm for Video Super-resolution based on Compressive Sensing', and it wins 'outstanding graduation thesis'
- Develop many android games as my hobby
 - solitaire: <https://github.com/xifeiwu/android-solitaire>
 - lianliankan: <https://github.com/xifeiwu/android-llk>
 - eatdot: <https://github.com/xifeiwu/android-eatdot>
 - photopuzzle: <https://github.com/xifeiwu/android-photopuzzle>

EXPERIENCE

Jul 2012 - Aug 2015

Institute of Software Chinese Academy of Sciences

engineer

- custom Linux distribution using shell script.
 - <https://github.com/xifeiwu/distro-iso-build>
- deb package for updating system written by python.
 - <https://github.com/xifeiwu/python-cdosupdate>

- Develop hybrid app on android. Sever side is written by nwjs, and client side native call is got by the framework of Cordova, and the UI framework is based on the third party project of appframework, the following repos are some Cordova plugin.
 - network service discovery: <https://github.com/xifeiwu/android-ibp-plugin-nsd>
 - socket connection: <https://github.com/xifeiwu/android-ibp-plugin-socket>
 - connection between phone and watch: <https://github.com/xifeiwu/android-ibp-plugin-watch>
- A text parser written by PHP
 - a simple text parser written by php: <https://github.com/xifeiwu/php-exam-parser>
- server side app used for getting user feedback written by nodejs.
 - feedback server: <https://github.com/xifeiwu/nw-feedbackserver>

Sep 2015 - Now

Acadine Technologies

Frontend developer

- Calendar is a big frontend app, it use many web components, such as, h5-header, h5-input-wrapper, h5-dialog, h5-toast, h5-process, and some basic component such as, navigation-manager, soft-keys-helper. It covers many h5 technologies, such as indexedDB, js worker, promise. Calendar use page.js for page direction, and use iCalendar protocol for communication between local and online, and several third party project is also used, such as ical.js, caldav.js.
 - Calendar app for Firefox OS: <https://github.com/xifeiwu/calendar>
- I am familiar with js and css, including web component, indexedDB, js worker, css flex display, css animation, css generated content, pseudo class(element) and so on.
- used to work with jquery, requirejs, bootstrap, appframework.

SKILLS

Languages used

- | | | |
|---------------|---------|----------|
| • JS/CSS/HTML | • C/C++ | • Java |
| • PHP | • Shell | • Python |

Used to work on

- | | |
|--|--|
| • Frontend development | • hybrid or native app development on android platform |
| • Linux distribution customization, build and manage deb repo server | • server side development using nodejs |
| • development on embedded system | • parallel computing on the platform of GPU |
| • shell scirpt, dbus, Git | |

SUMMARY

I used to work on many platforms and fields and focus on frontend development for nearly two years. I love software development and want to focus on specific field for a long time to accumulate more efficiency and ability.
